/note="vector: pME18S-FL3; Site_1: DraIII (CACTGTGTG);
Site_2: DraIII (CACCATGTG); lst strand cDNA was primed with an oligo(dT) primer [ATGTGGCCTTTTTTTTTTTTTTTT];
double-stranded cDNA was ligated to a DraIII adaptor [TGTTGCCTACTGG], digested and cloned into distinct DraIII sites of the pME18S-FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science) and kindly donated by Dr. Koichi Kawakami. Custom primers for sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end primer CGACCTGCAGCTCGAGCACA."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note=""Vector: pSPORTI; Site_1: Not1; Site_2: Sal1; lst strand cDNA was primed with a Not I - oligo(dT)15 primer [5 pcAraGTTCAGATCGCGAGCGGCGCCCTTTTTTTTTTTTTTTT]3 ; double-stranded cDNA was ligated to Sal I adaptors (BRL), digested with Not I and cloned into the Not I and Sal I sites of the pSPORTI vector (BRL), Library was constructed by Matthew Clark (Lehrach lab; ICRF, London and Max planck Institut fuer Molekulare Genetik, Berlin). cDNAs for EST analysis were selected following oligonuclotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and a single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          þ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              691.50

    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB seq length: 0

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Tallo

Kim,

333 379 275

```
A; Title: Sequence and analysis of chromosome 4 of the plant Arabidopsis thaliana.
A; Reference number: A85001; MUID:20083488
A; Accession: D85429
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-457 <STO>
A; Cross-references: GB:NC_001268; NID:97270586; PIDN:CAB80304.1; GSPDB:GN00140
C; Genetics:
A; Gene: A74936380
A; Map Cstiton: 4
C; Superfamily: Synechocystis cytochrome P450 slr0574; cytochrome P450 homology
C; Keywords: heme; iron; metalloprotein
C; Seywords: heme; iron; metalloprotein
F; 396/Binding site: heme iron (Cys) (axial ligand) #status predicted
